

Remote effects of  
meditation and intentions.  
Experimental approach  
with GDV Bio-Well  
technology

Prof. Konstantin G. Korotkov Ph.D.,  
President  
Bio-Well, Boulder, Co, USA

Concordia University

# Overview

- Evidence exists (1000+ research papers) that Gas Discharge Visualization (GDV) technology can be used to collect biofield information that can facilitate a better comprehension of causes of disease and support medical doctors and health care practitioners in their health care practices.
- The study of the remote effects of meditation and intentions is a significant area of interest within the field of Bio-Well research.
- Special environmental sensors including the "Sputnik" antenna and a Bio-Well water sensor can be used to sensor responses to both individual and group meditation sessions.
- Our research exhibited data analysis to the meditation process, demonstrating a statistically significant difference between the parameters recorded 30 minutes prior to meditation and during the 20 minutes of meditation.
- In a series of experiments, the "Sputnik" sensor was employed in conjunction with the Bio-Well water sensor for the purpose of detecting remote intention. The presented data supports the quantum consciousness paradigm that states that consciousness is not local but rather an omnipresent phenomenon that is connected to the quantum unified field.

# EPI and GDV

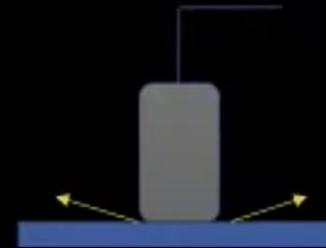

---

- This technique allows one to capture the image of electrophotonic impulse around human fingertips and to extract information about sympathetic and parasympathetic nervous system activities (e.g. stress levels and relaxation).

# Measurements

What we are measuring?

## Information collected

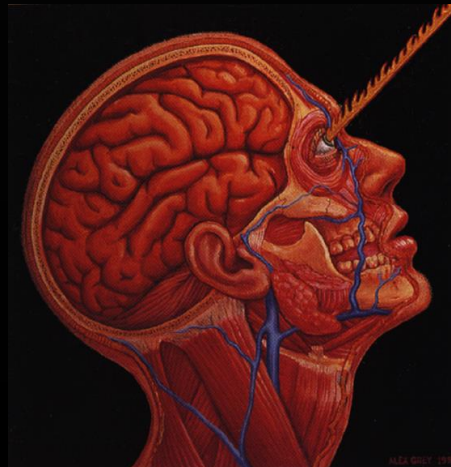

### Parameters of the GD-Images

- Area (number of pixels)
- Average intensity (average intensity of all pixels)
- Overall Energy of discharge (Area  $\times$  Av. Intensity  $\times$  conversion coefficient)
- Standard deviation of Area
- Standard deviation of Energy

# Triple Manifestation of a Human Being

Intention

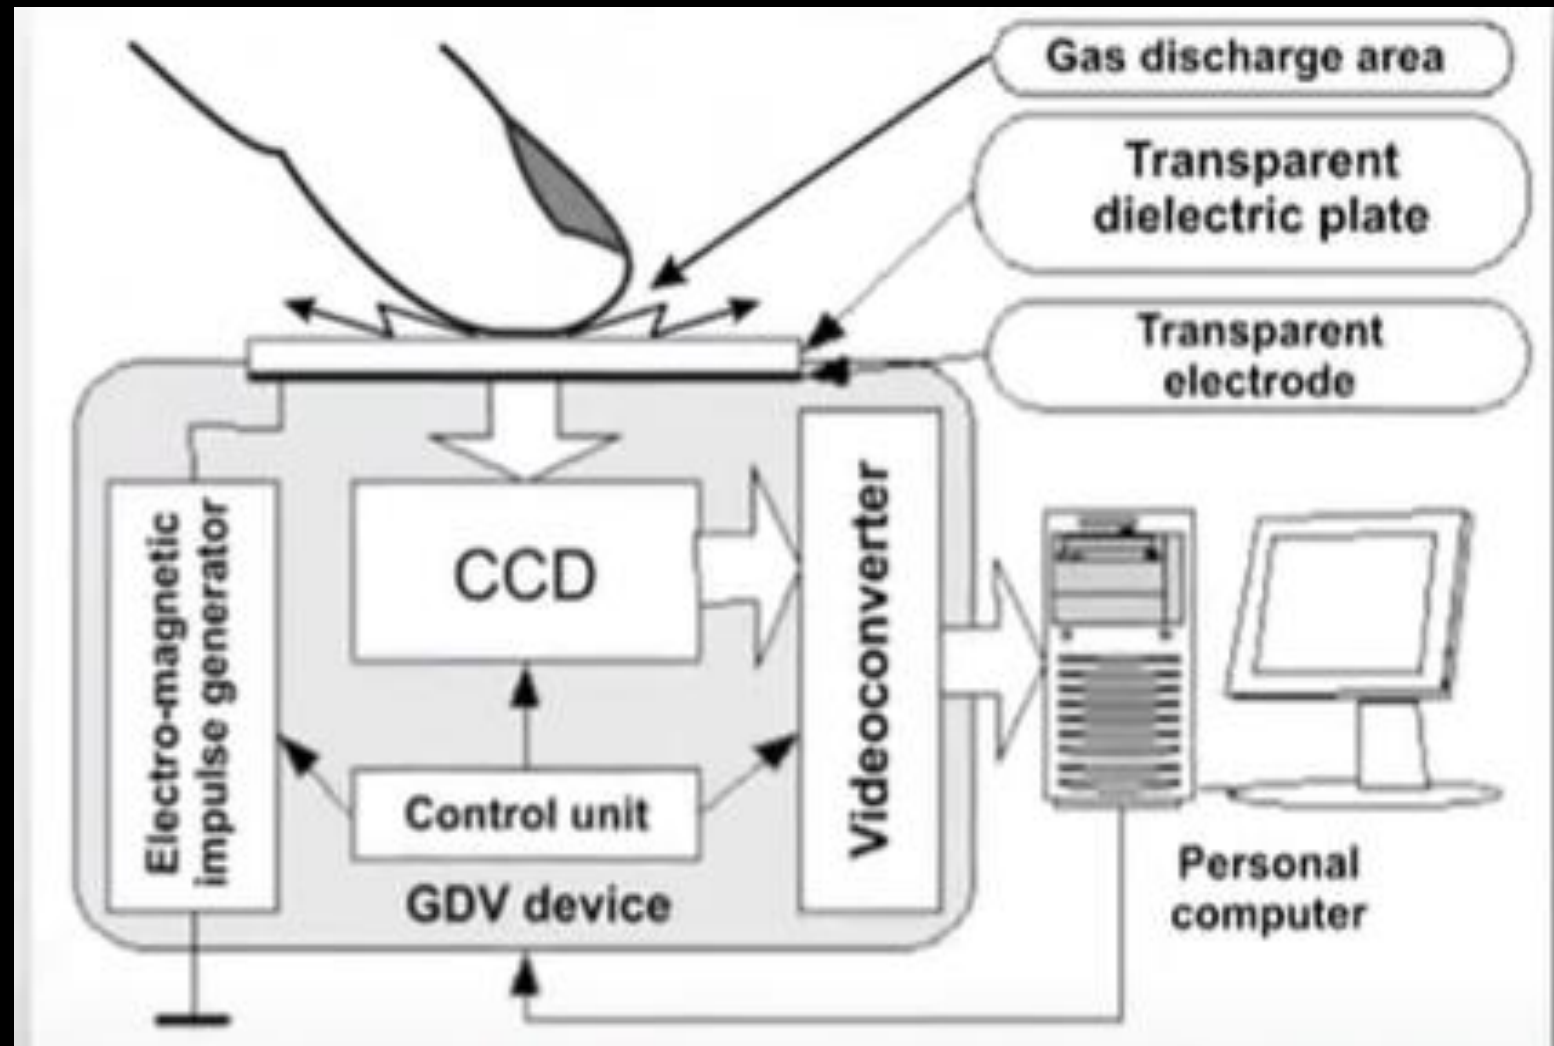

Physical reality

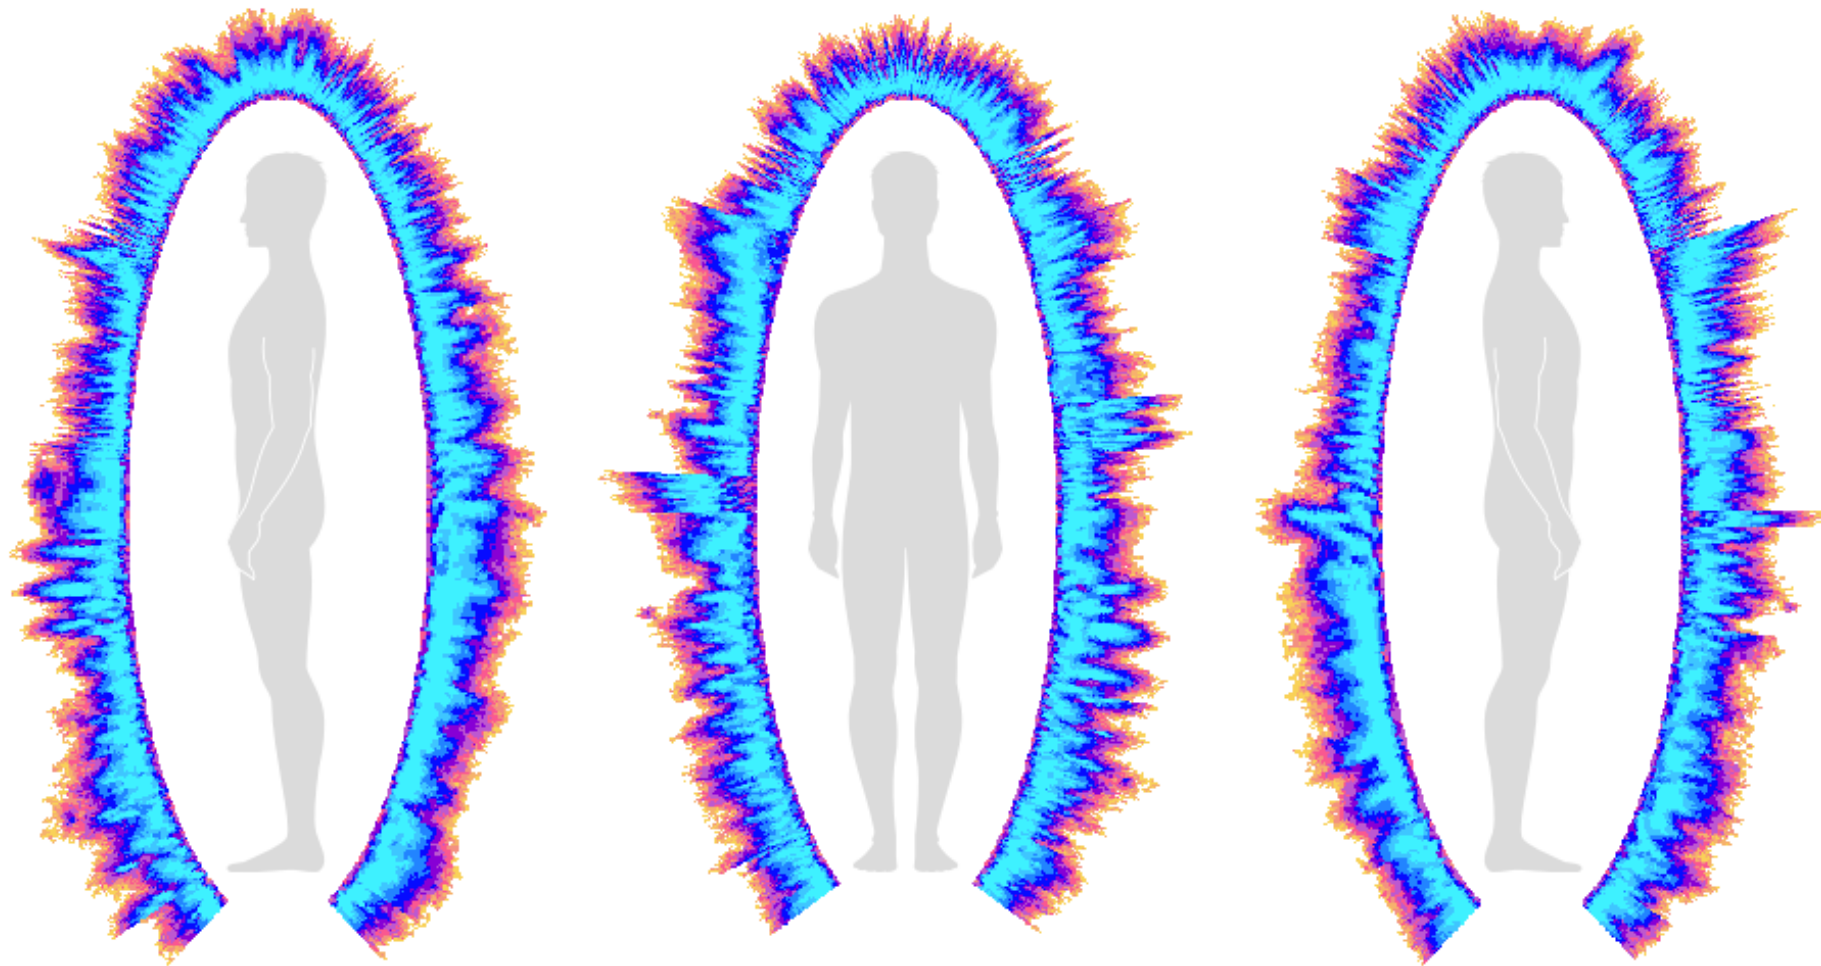

Emotion and Mental energy  
(Control by Guided  
Meditation)

## GDV Device Finger Scan

## STRONG HEALTHY FIELD

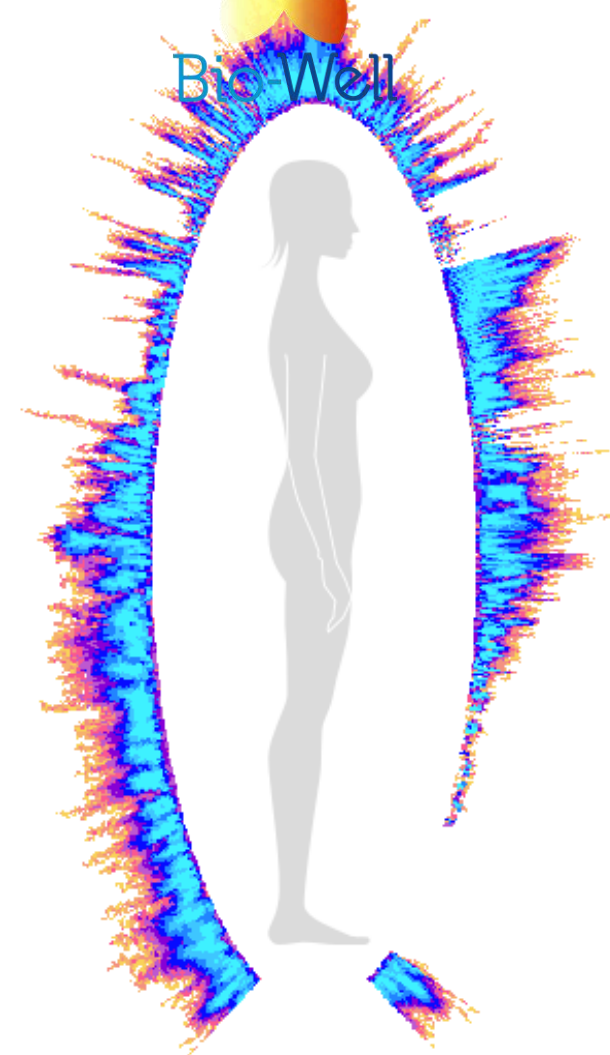

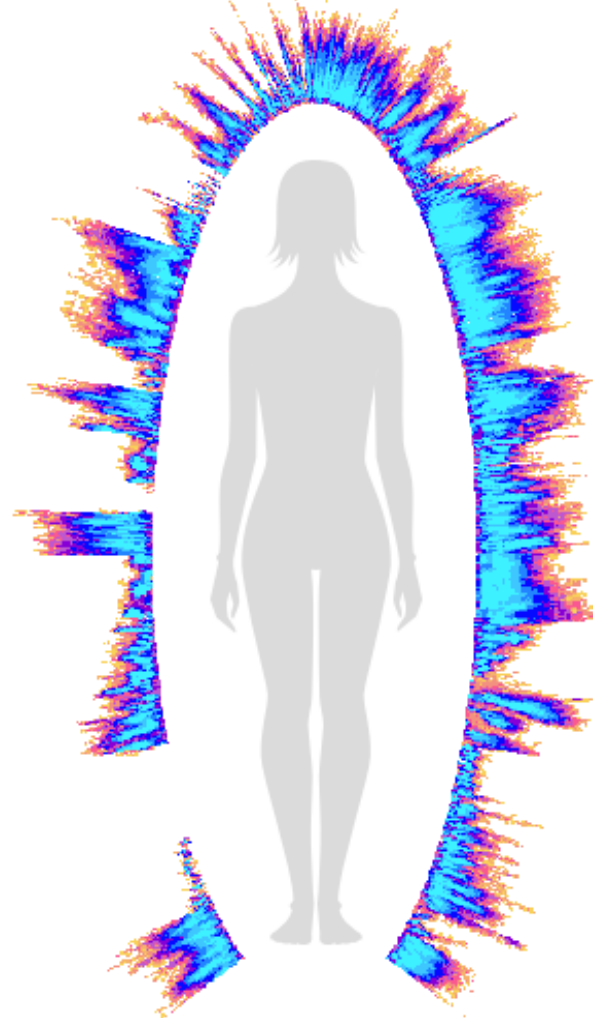

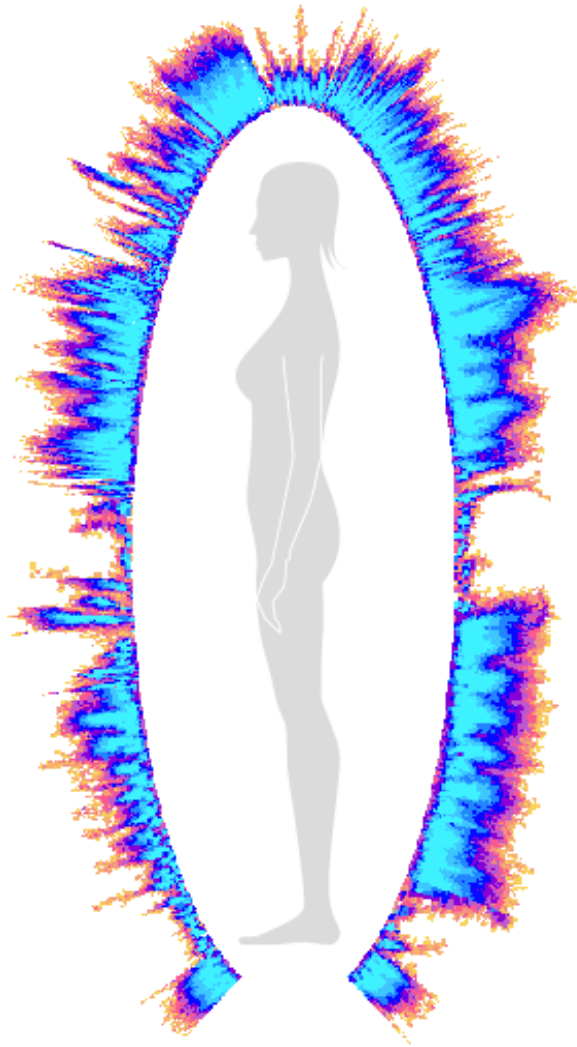

Energy 45 Joules ( $\times 10^{-2}$ ) Balance 86%

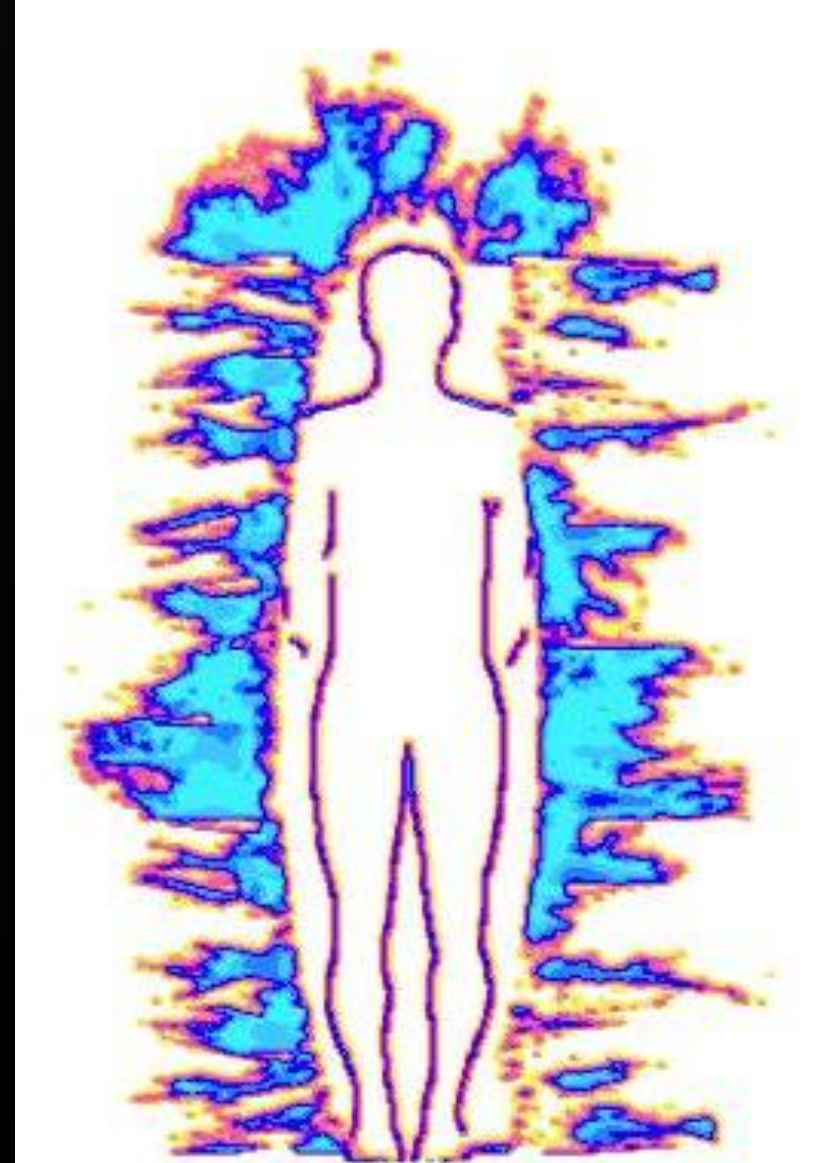

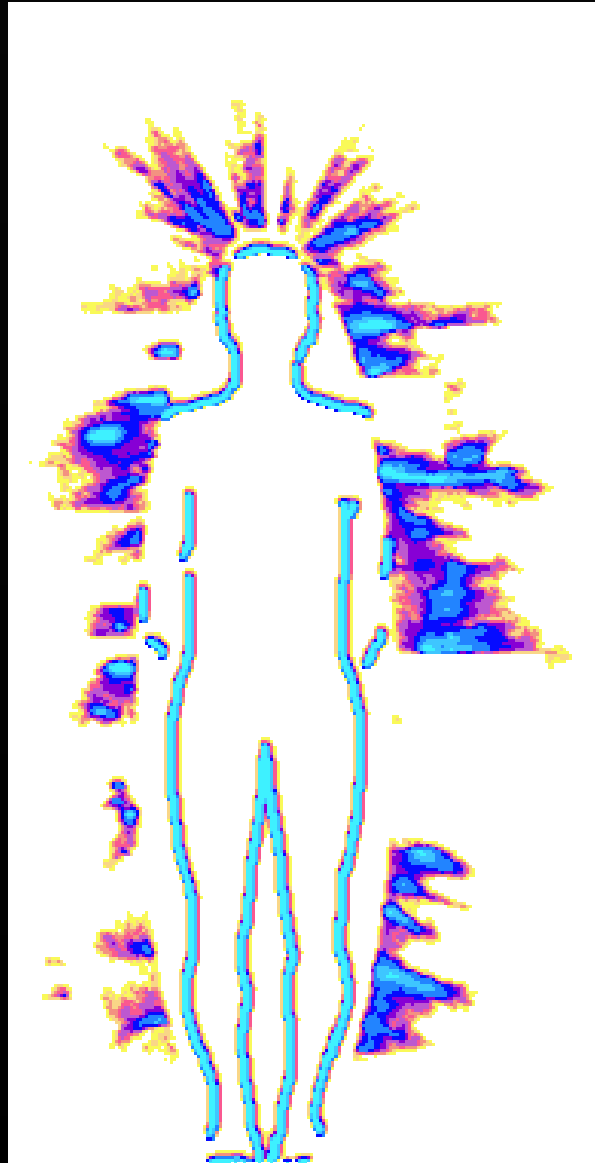

STRESS

Bio-Well

# Energy Field of a person before and after treatment

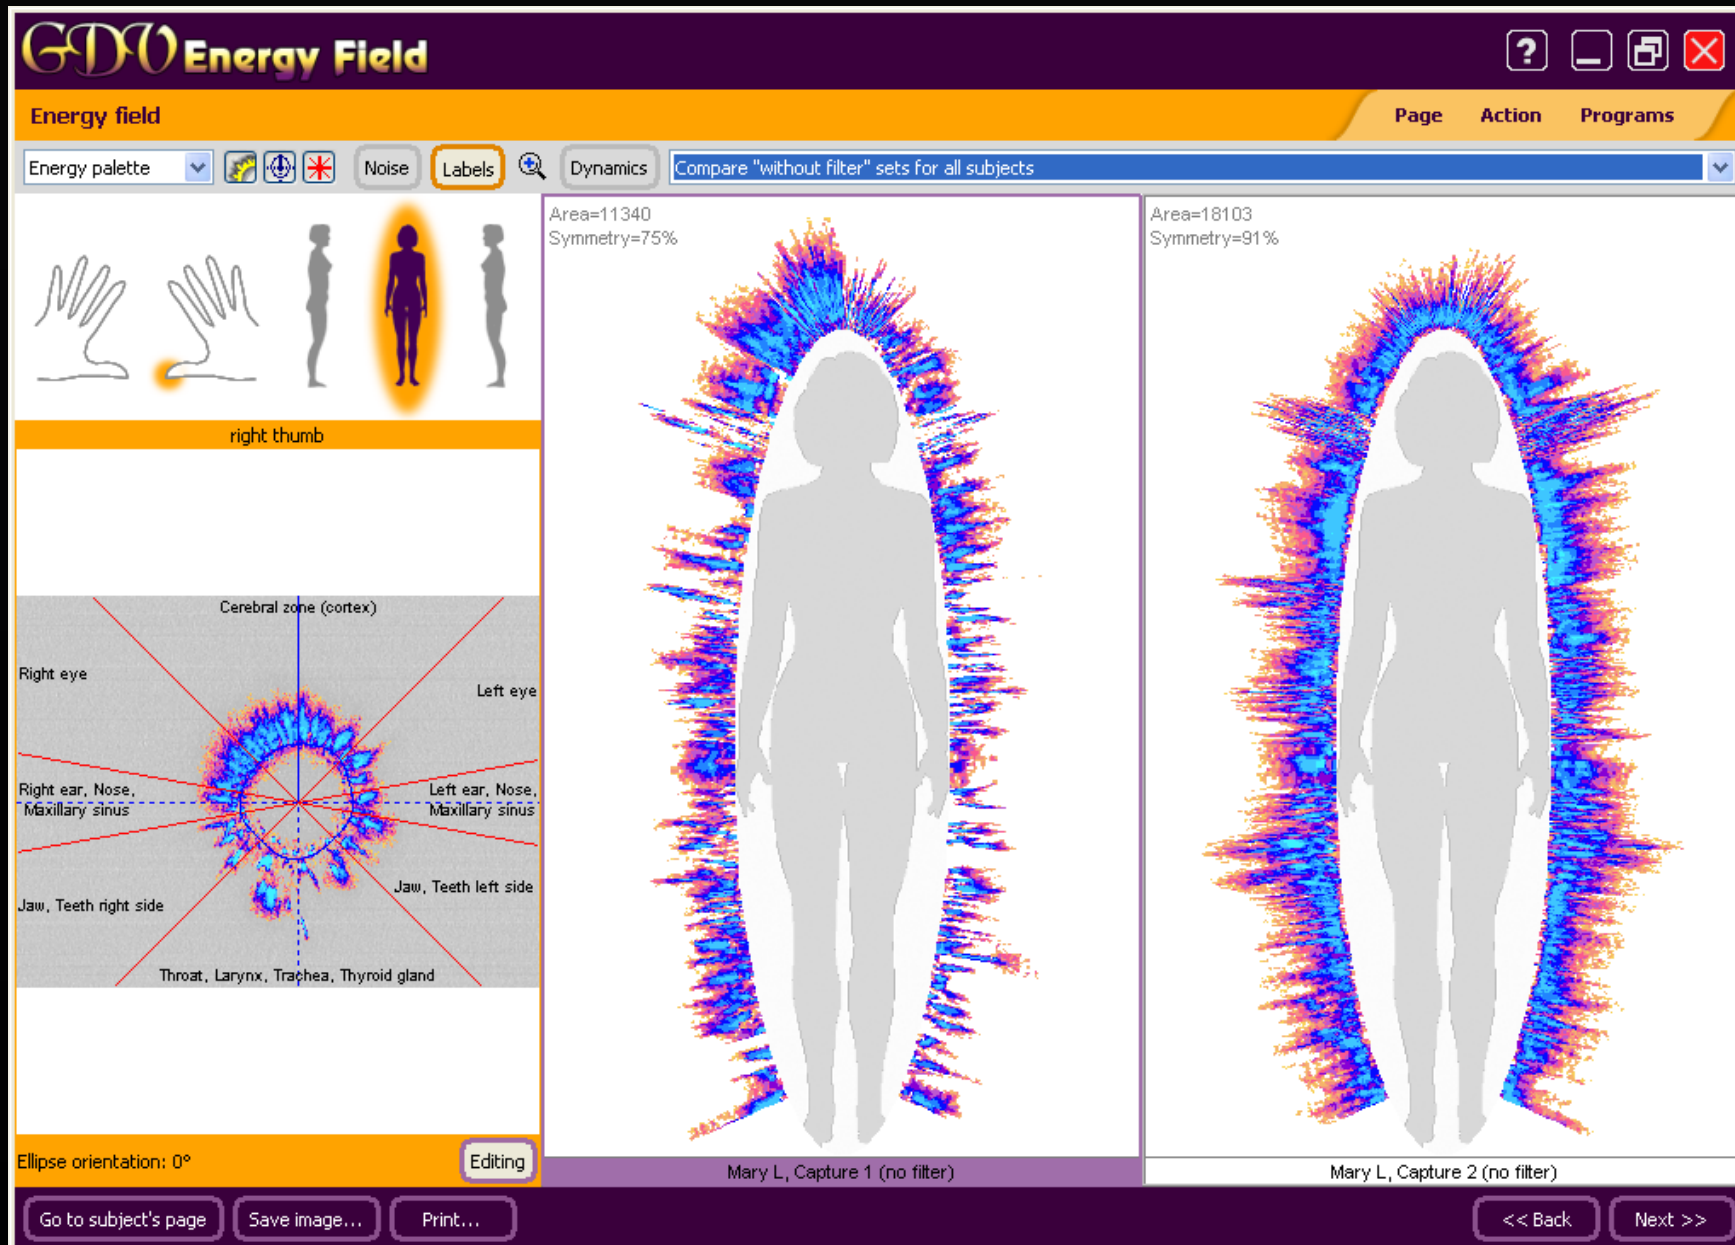

# Reconnective Healing technique

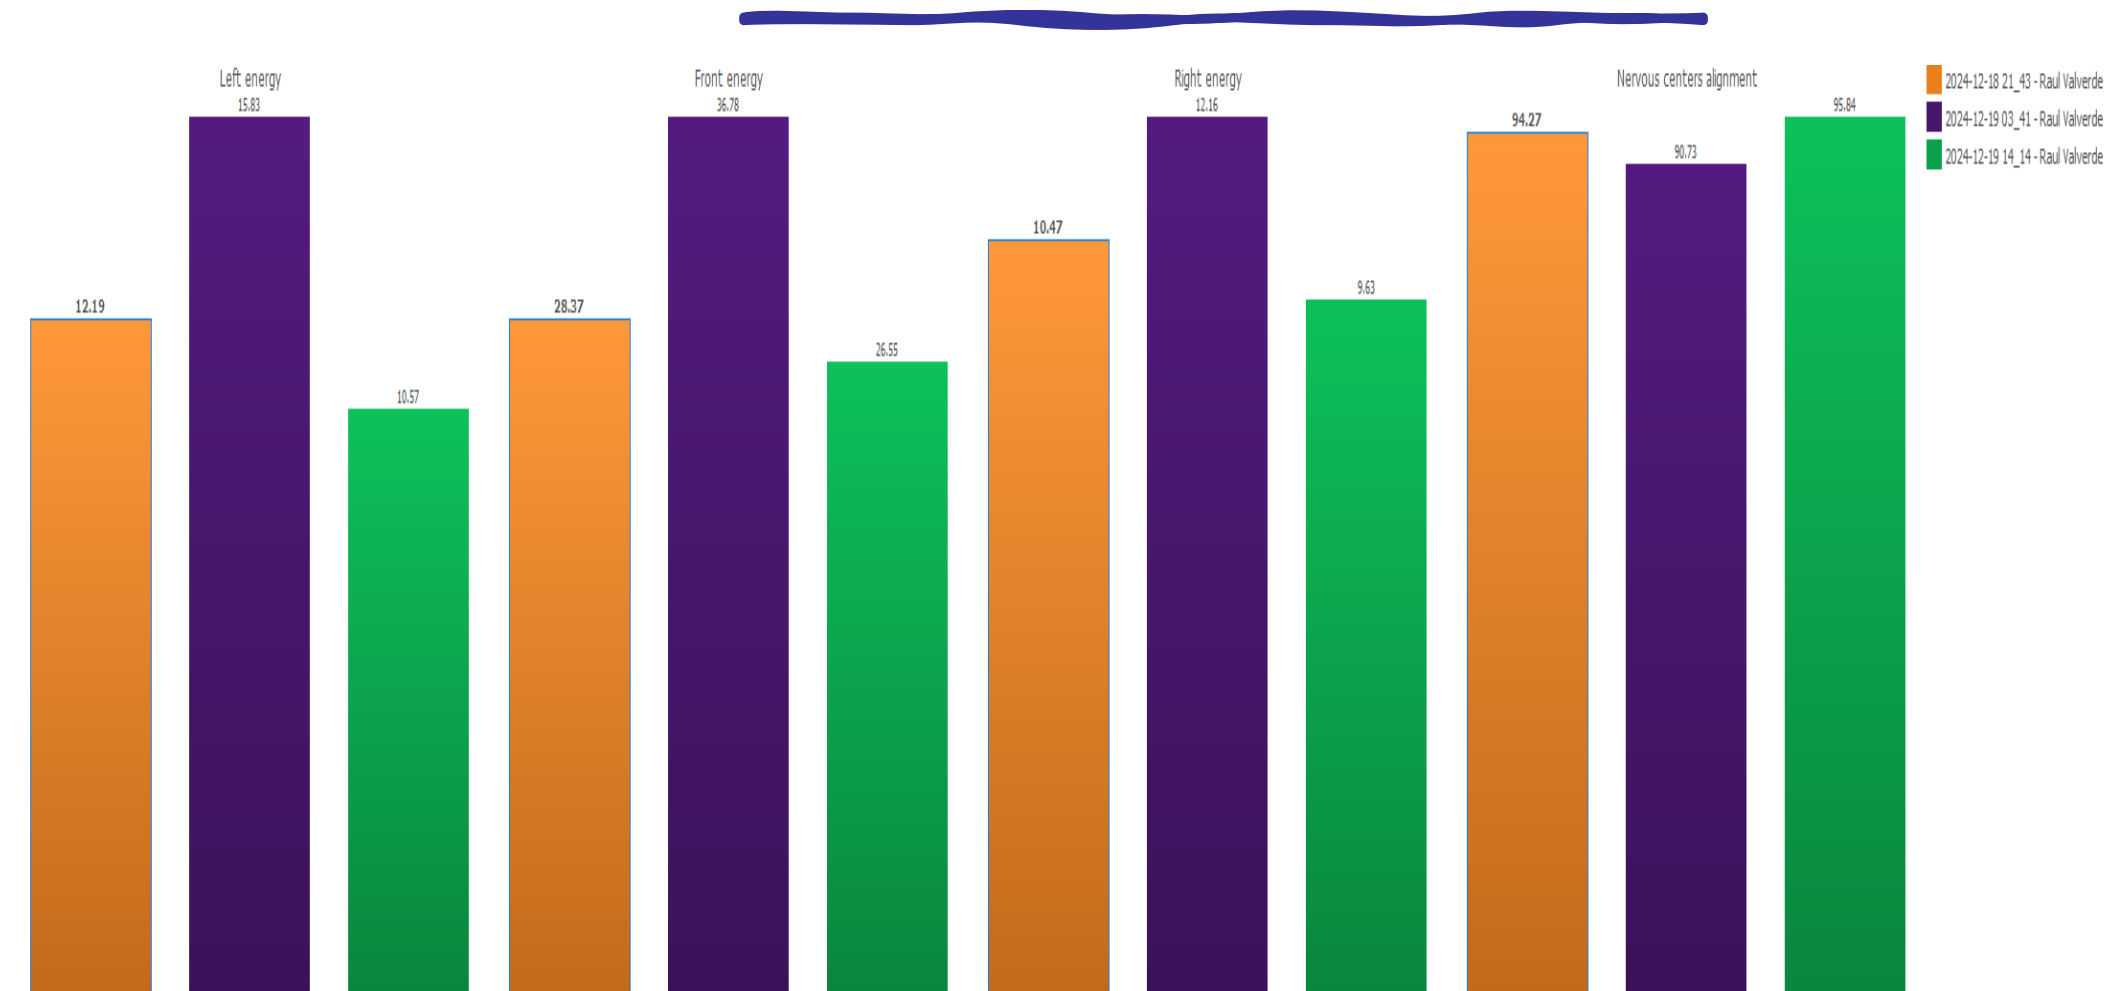

Dr. Eric Pearl

# Influence of Reconnective Healing

Mexico, City, Dec 19, 2025  
(Energy of one participant)**

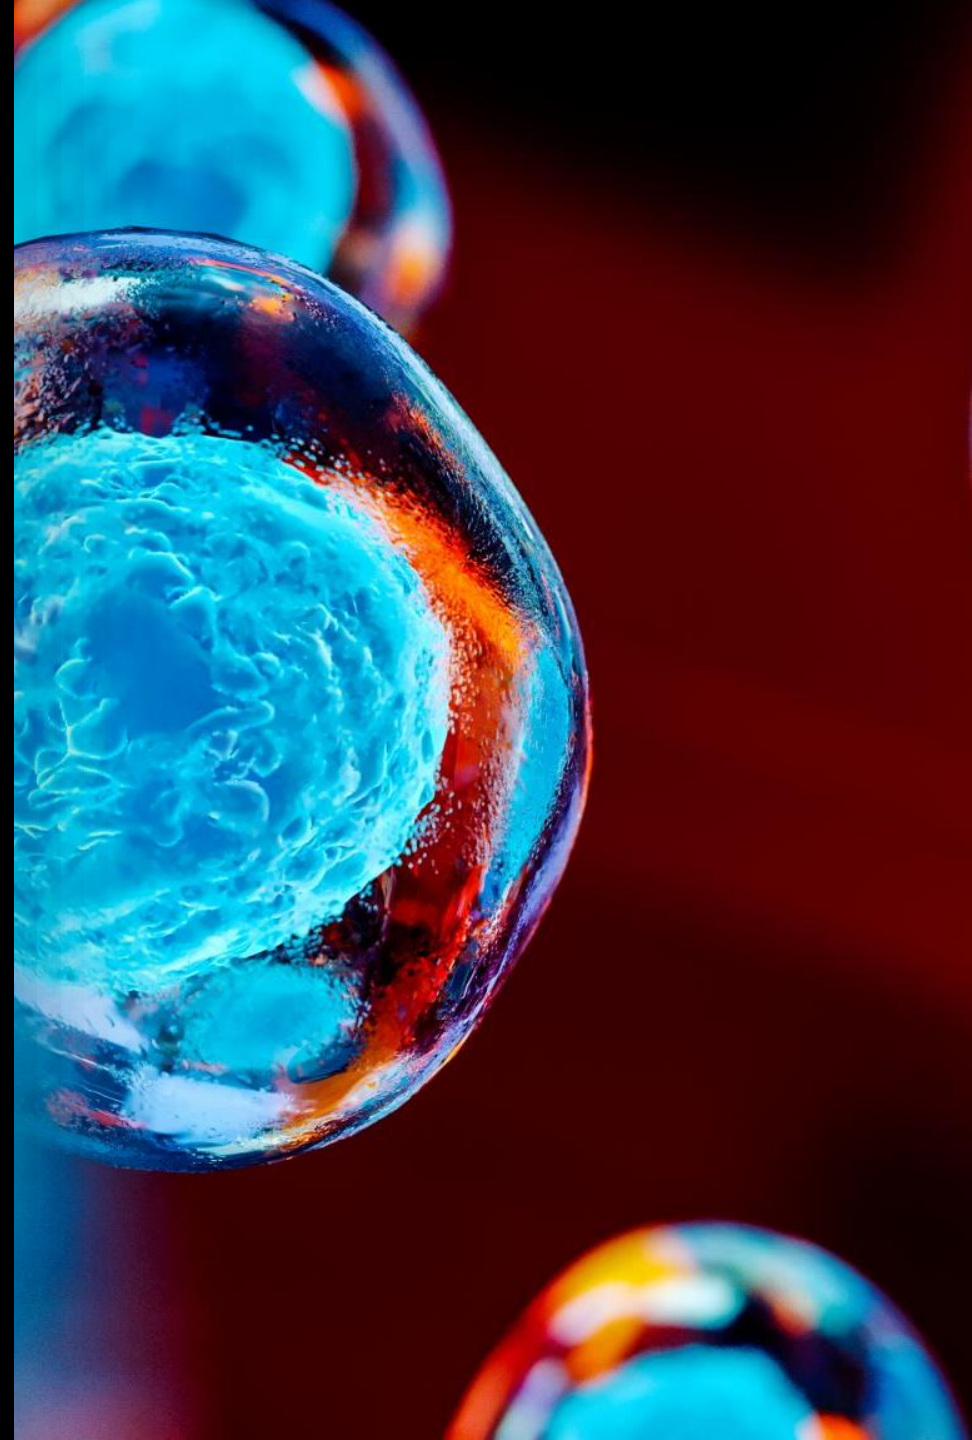

# Sputnick antenna

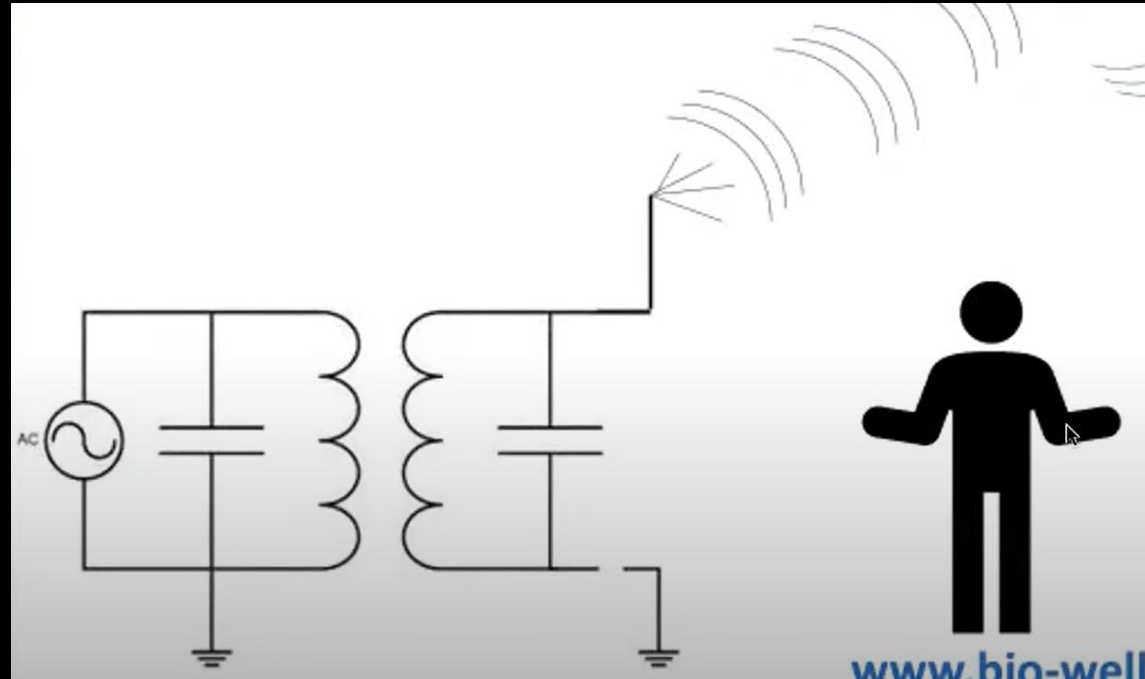

---

# What influences gas discharge in the surrounding space?

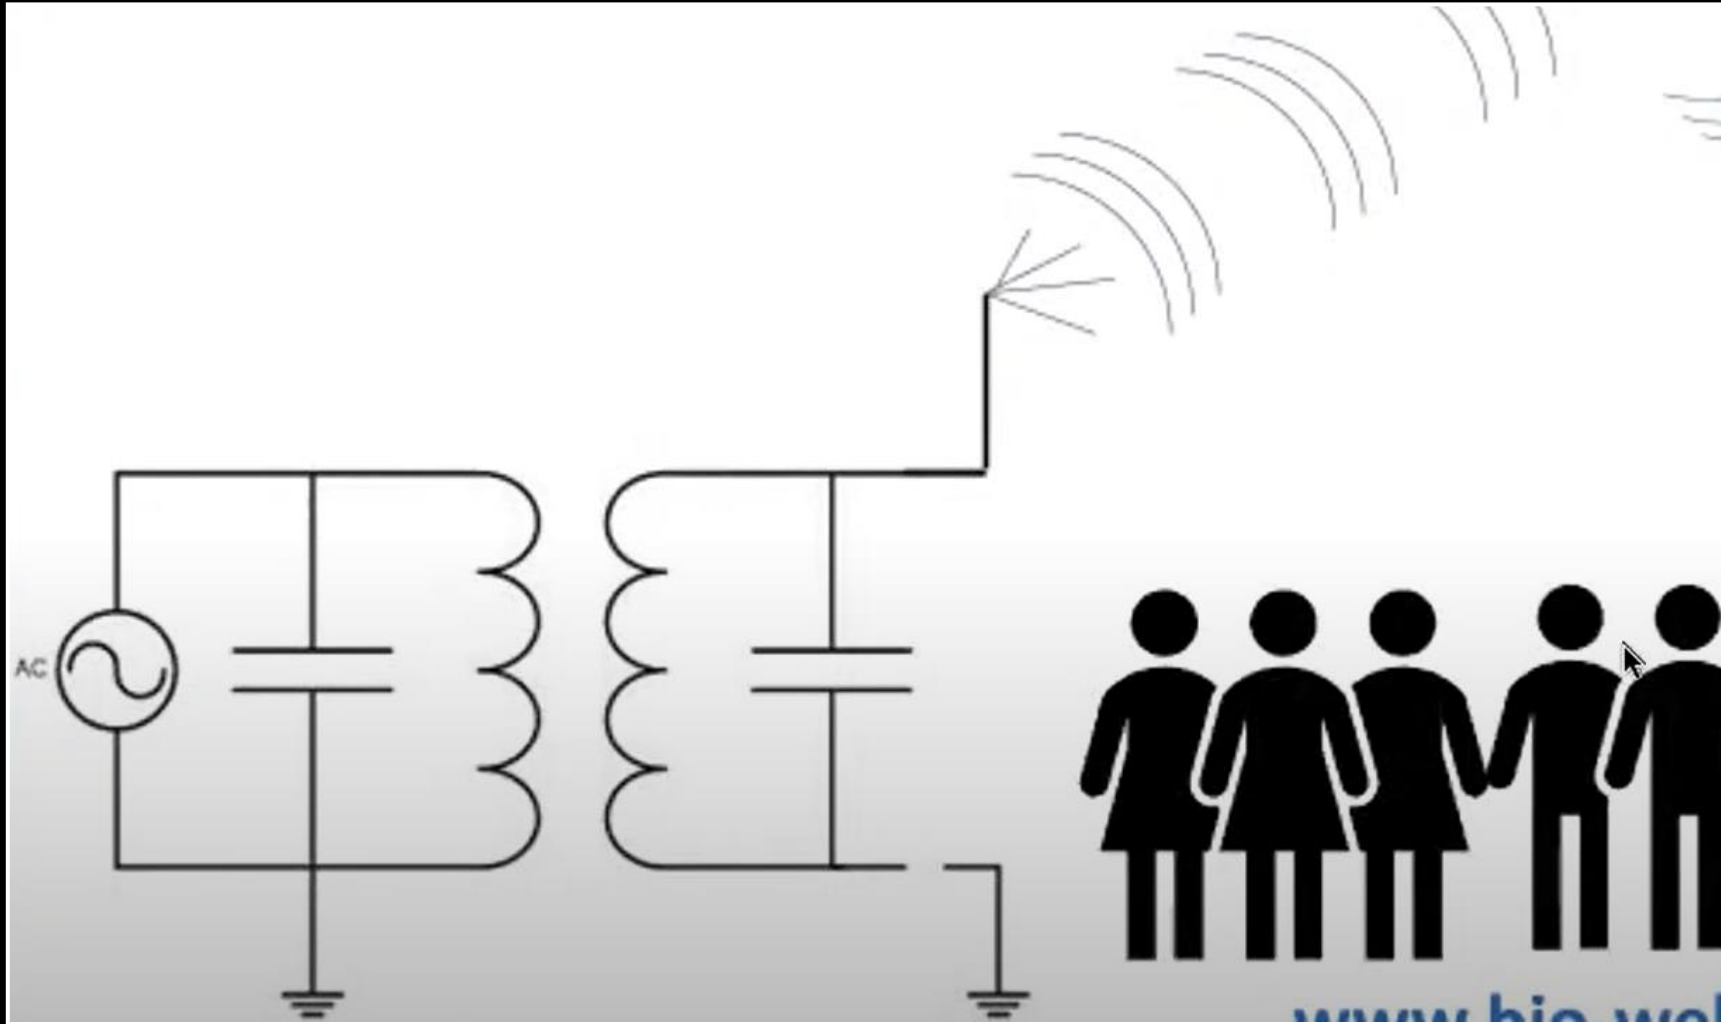

- Chemical composition of the air
- Relative humidity of the air
- Air temperature
- Air pressure
- Magnetic fields
- Electro magnetic fields
- Geo or techno active zones
- Concentration of aero ions
- PEOPLE

- Human consciousness affect the bioenergy field
- Biowell can be used to measure changes of states of consciousness represented by changes of frequency

Measuring consciousness

What happens when we have a group of people?

TEXT

# EXPERIMENT 09.09.2016

## ST. PETERSBURG

11 people in Moscow, Penza and Belgorod was sending intentions from 11 to 11.30 am

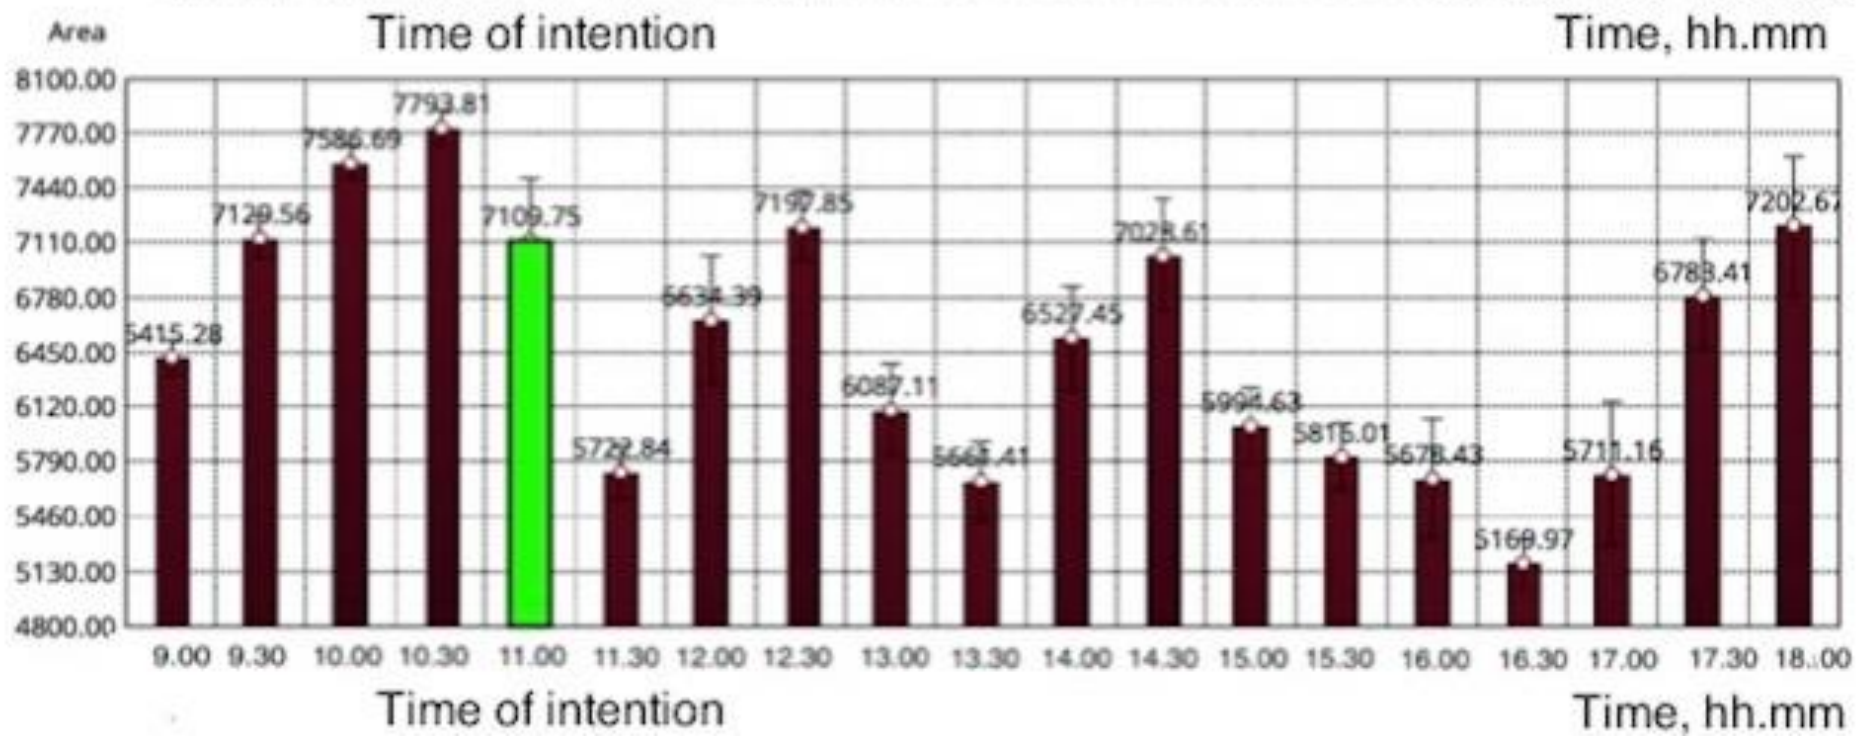

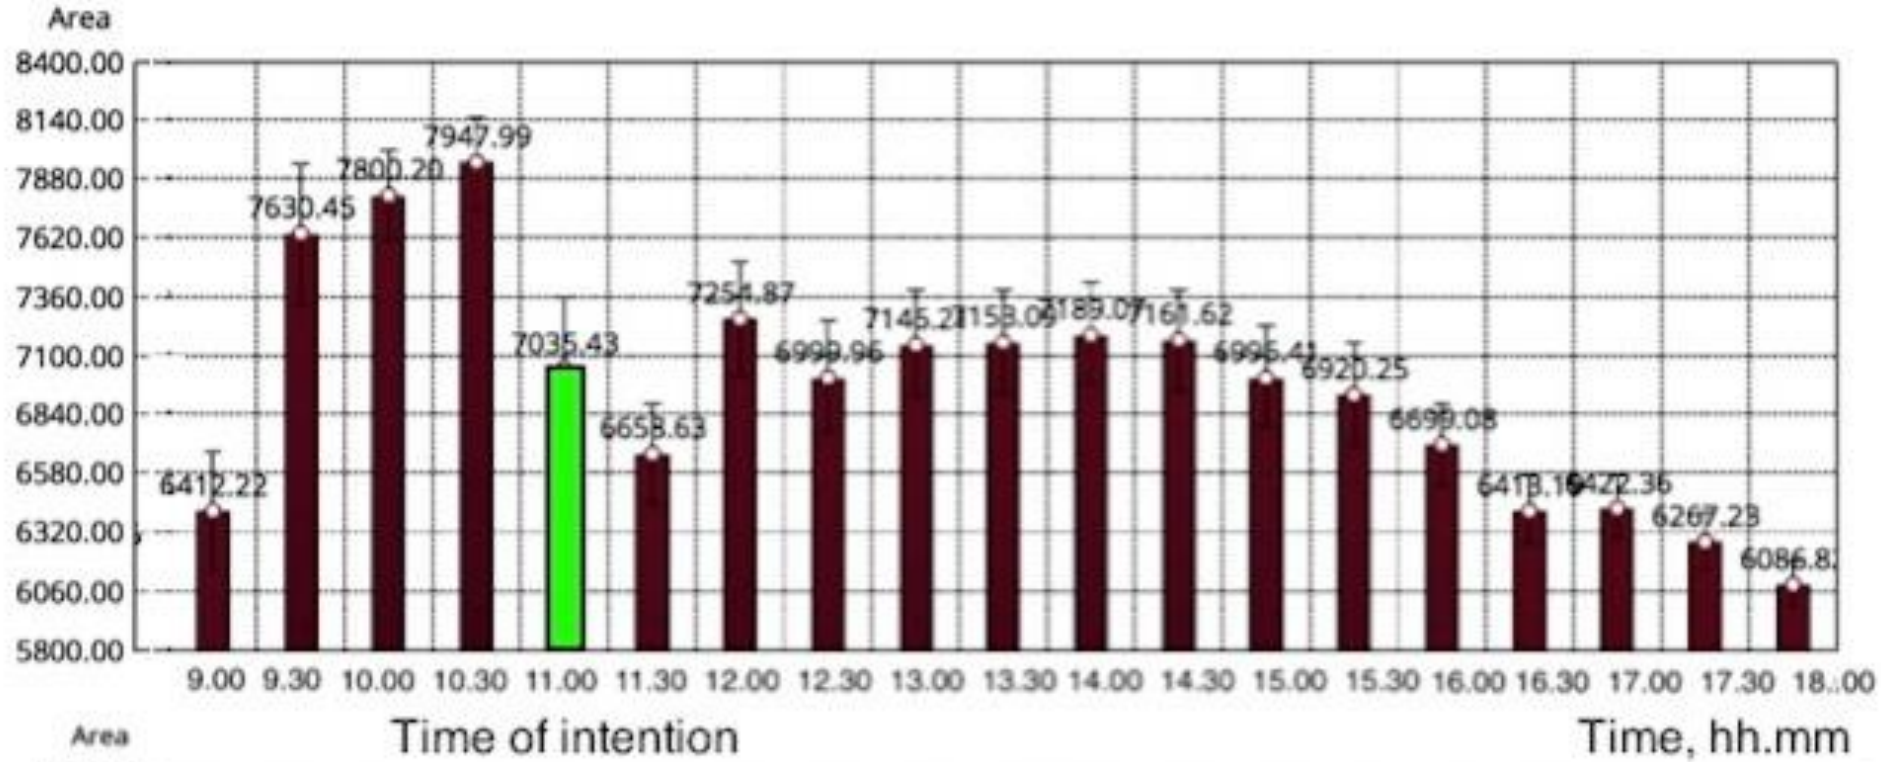

2 Bio-Well devices in parallel operated from 8.40am till 6pm in off-line mode.

No people was present in the room from 9.40am till 6pm

Data were downloaded to server and processed at 6 pm

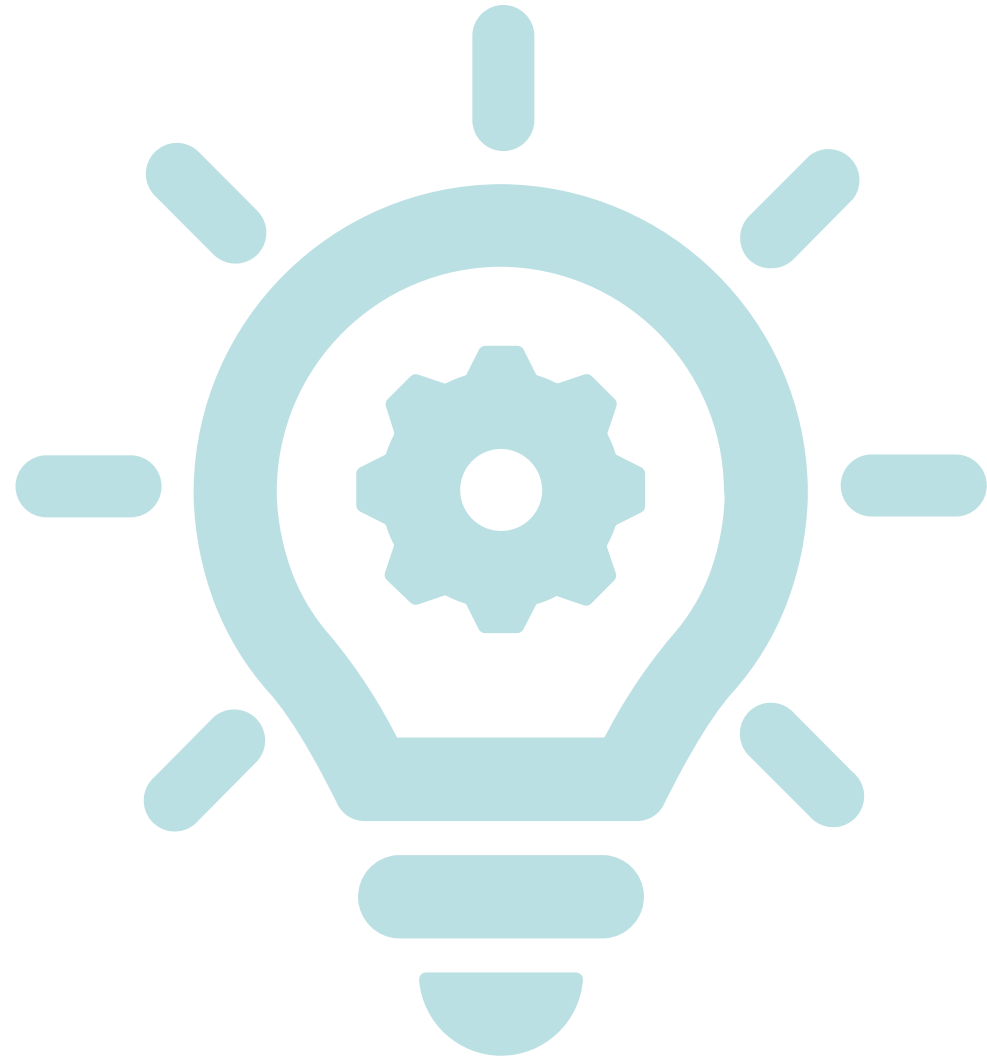

### SENDING INTENTION

# Potential Model to explain the increases of energy in Meditation and Intentionality experiments

---

# Circuit model

A vertical image on the left side of the slide shows a close-up of a document. It features a blue line graph with several peaks and valleys. A pen tip is visible at the top right of the graph, appearing to have just finished drawing a line. The background is a light blue or white paper.

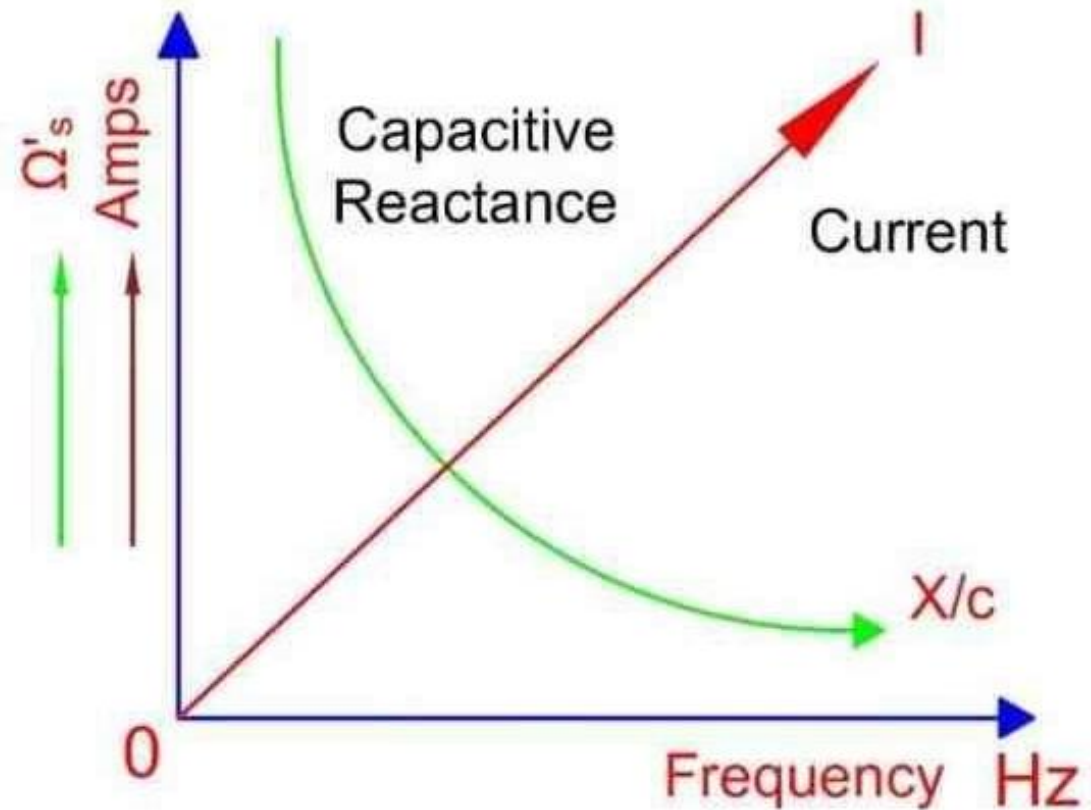

# Analysis

- At a very low frequency of the energy captured by antenna, the reactance becomes very large and therefore  $V_G$  is very low compared to  $V_{oc}$  [1]. The energy captured with Biowell will be lower.
- At a higher frequency of the energy captured by antenna, the greater the current because the reactance of the capacitors drop.  $Z_A$  is small compared to  $Z_0$ ,  $V_g$  can be approximated by  $V_{oc}$  [1]. The energy captured with Biowell will be higher.
- [1] R. C. Hansen, "Fundamental limitations in antennas," *Proc. IEEE*, vol. 69, pp. 170–182, 1981.

## Capacity reactance against frequency

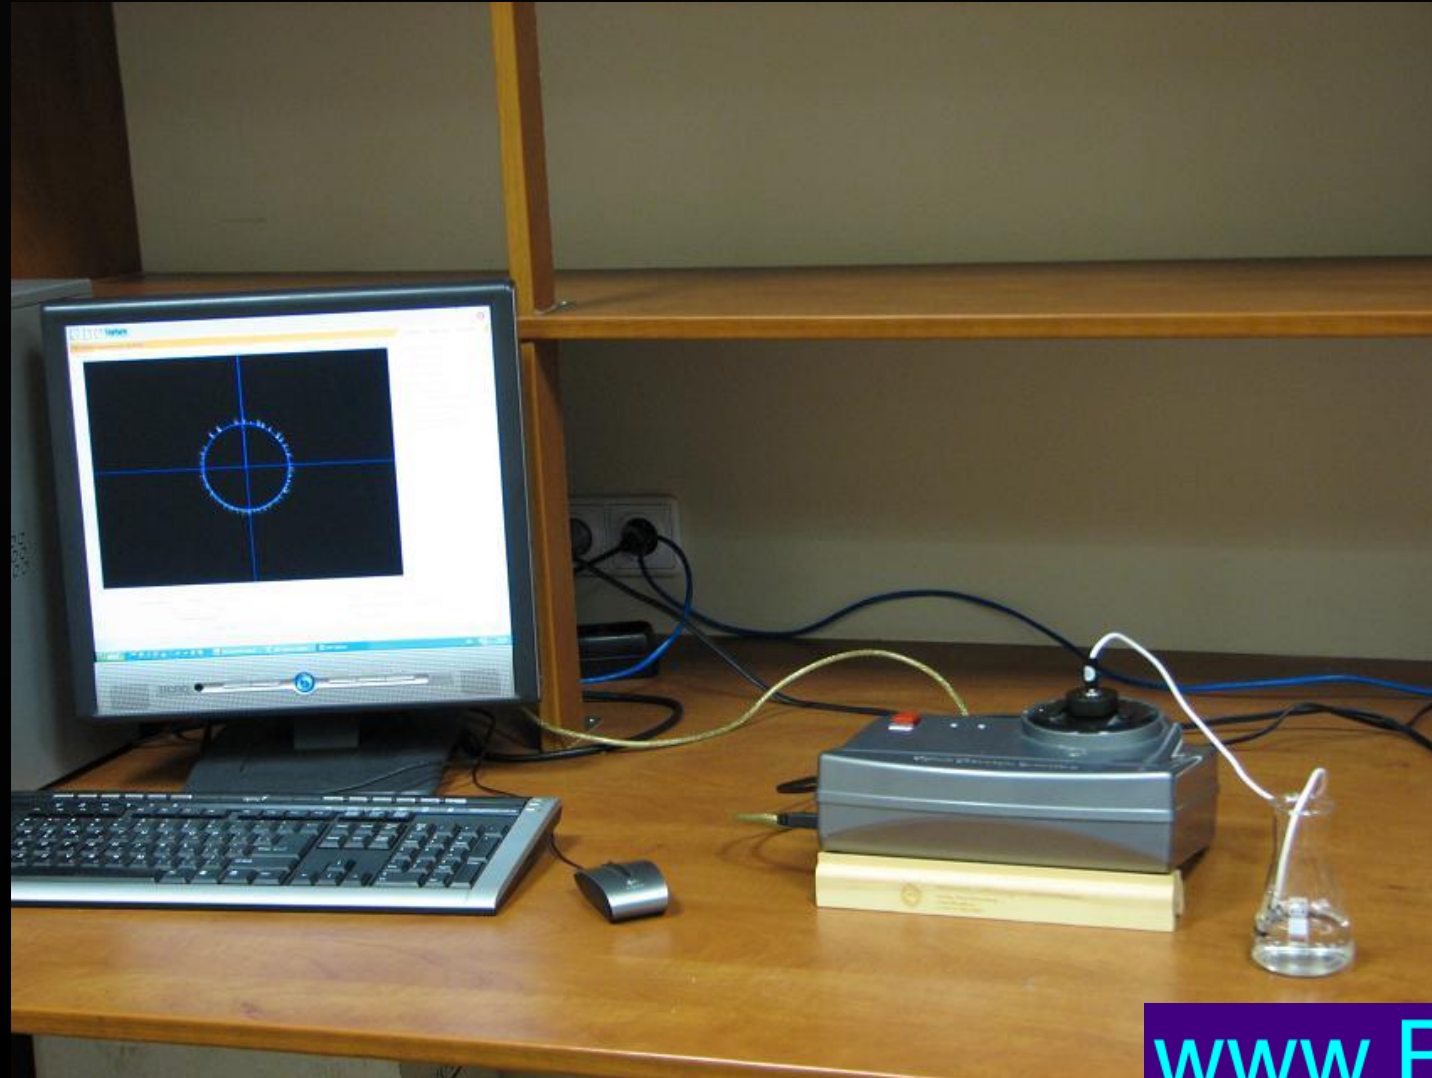

The opposition to the flow of alternating current due to capacitance is called "capacitive reactance."

$$X_c = \frac{1}{2\pi f c}$$

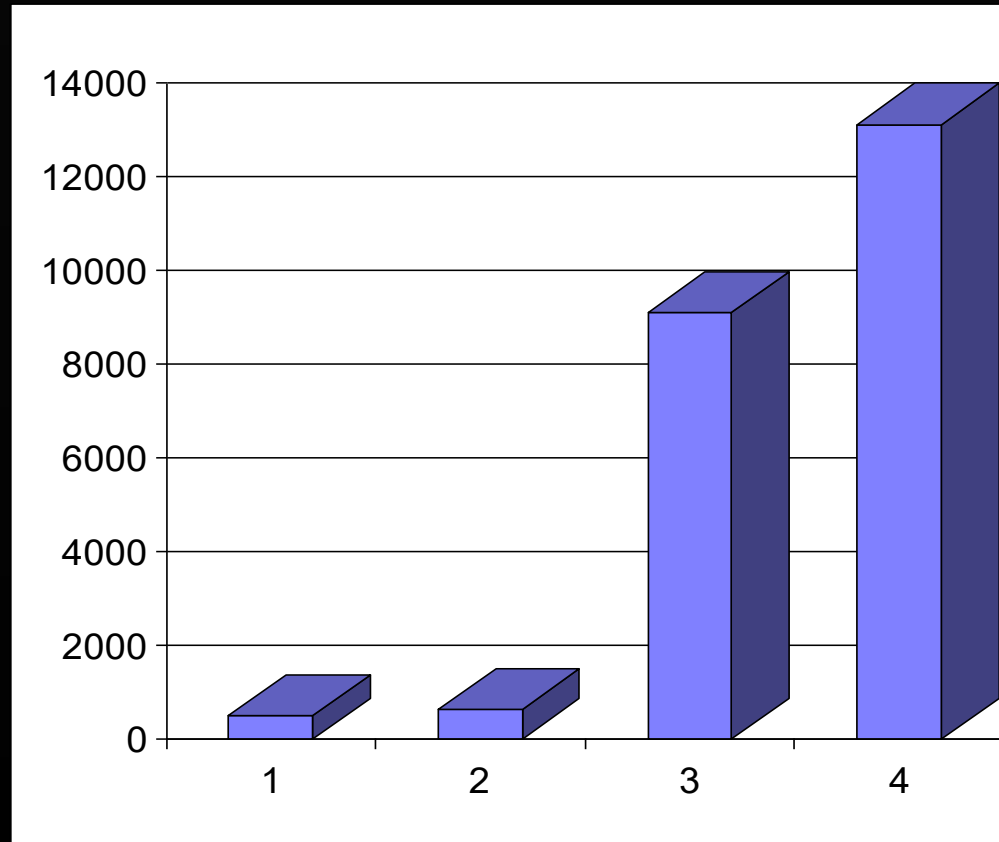

Capacitive Reactance against Frequency

# Measuring Energy of Water

# Water Intention Experiments

## GDV Scientific Laboratory

Before: Mean: 3820.510; Std.error: 6.450; Confidence interval: 12.644

After: Mean: 3919.502; Std.error: 7.501; Confidence interval: 14.705

By Paired Student test samples are statistically dissimilar;  $p = 0$

# Conclusions

- GDV technology has shown to be a measurement device that is key for consciousness research related to intentions and meditations with applications to spirituality and health
- GDV technology provides the energy measurements required to prove hypothesis for unconventional healing techniques that otherwise would be very difficult to prove
- Quantum, DNA and Electromagnetic Theories need to be incorporated with Bioenergy theory to make a stronger integrated field with Bioenergy theory
- More controlled studies need to be conducted to show the relevancy of GDV technology for consciousness research
